[Written guide >](#)

01 Seats & revenue

Select a sample seating group. Edit ticket allocation, price and sell-through. Sold count and ticket revenue recalculate. Use in event scenario copies those inputs into your plan.

02 Plan an event

Choose soccer, community or concert. Adjust attendance, ticket price, premium packages, concessions, sponsorship and costs. Compare modeled gross and contribution with every assumption visible.

03 Build a report

Review the current scenario. Download CSV creates a real file with inputs, results, timestamp and limitations. Print / save as PDF uses your browser. No report is emailed.

04 Data & integrations

Search 42 provider and input references. Check access rights, fields, mapping and validation. Every connection is proposed. Production use needs authorized data rights, credentials and staff review.

Know the limits

All business figures are fictional samples. Contribution is gross less listed costs, before tax, financing, capital expenditure and unlisted overhead; it is not net profit or a forecast. The animated stadium is a stylized reconstruction, not a survey or certified seat map. No live feeds or booking availability are represented.
